

Hand Control HB400

The LINAK® hand control HB400 is designed for staff and patients to control movement of healthcare applications. It is easy to lock selected movements and increase patient safety. The user-friendly interface design makes it very simple to use for patients. The HB400 is compatible with some LINAK analogue and all OpenBus control boxes and the functionality can be adapted exactly to the market needs.

The HB400 comes with exchangeable cable and with an IPX6 and IPX6 Washable DURA rating, making it future-proof and able to perform for many years.

Immediate overview of locked and unlocked functionality
