View live status info for nearby devices and quickly identify systems that need troubleshooting, cleaning, service, or have status notifications like low battery.

OEMs can customise their own application help content - from text and links, to contact information, videos, and manuals - live and 24/7 through the web portal accessible

from any device with a browser.

Wirelessly access system data from nearby devices via Bluetooth to discover usage history, feedback status, and diagnose problems with the system on the fly with simple troubleshooting tools.

OEMs can tailor the app by customising to any company aesthetics using colour and logo control for both the company logo and the application image.

Unlock the digital potential of your healthcare business
