

UBL2

Now with multicolour option

The UBL2 with multicolour option creates an optimal under-bed lighting solution in hospitals, nursing homes, and homecare settings, heightening the level of efficiency and helping to reduce tripping hazards.

Visualisation by colour

The multicolour options allow caregivers to quickly identify the status of a bed from a distance, increasing operational efficiency and improving care. The colour settings can be tailored to individual needs.

The UBL2 helps prevent the risk of nighttime falls by providing patients with clear and safe navigation in dark environments, at the same time minimising disturbances to other patients.

Change of colour

The capability to change colour during operation offers an easy way of communication through colours for quick status identification.

Specifications

- 3 LEDs for powerful illumination
- Different colour options: cold white, red, green, blue, yellow, magenta, and cyan
- Customisable colour settings
- Colour change during operation
- Compatible with LINAK® OpenBus™ control boxes
- Rated IPX6 and IPX6 Washable DURATM for optimal hygiene
