Control Unit BP10

The Control Unit BP10 product series is designed for the control of beds with the LA10 system. The control unit is a small hand-held control which can optionally be placed in a bracket on the bed and used as a panel. The standard control unit is the BP12 version controlling 2 channels. Versions controlling 1 or 3 channels are available.

The Control Unit BP10 product series combines ergonomic design and functionality into a user-friendly control with intuitive buttons.

BP12

BP10 bracket

- Ergonomic and elegant design
- Magnetic
- Intuitive use
- Replaceable CR2032 battery
- PVC-Free™
- Weight: Approximately 50 g
- Sleep mode
- Power-saving mode

Sleep mode:

When no key is pressed, the control unit will enter sleep mode 5 seconds after last operation.

Power-saving mode:

If a key (or a key combination) is pressed for more than 2 minutes, the control unit enters power-saving mode even if the control unit at that time is connected to a system. When this happens, the control unit will disconnect from the system (if connected) and enter a power-saving mode where the keys are scanned every 500 ms for changes (the control unit is sleeping the rest of the time). This is done to conserve power if a key becomes stuck during transportation. The power-saving mode is left when all keys are released.
