LINAK INFORMATION ABOUT BATTERY REGULATION (EU) 2023/1542

To LINAK Customers,

LINAK is committed to advancing sustainability and the responsible use of resources across its operations. As part of this commitment, LINAK confirms that all batteries manufactured after 18 August 2024 and incorporated in LINAK products comply with the Battery Regulation (EU) 2023/1542. We work closely with our suppliers and actively pursue improvements in battery recycling.

LINAK supports the Battery Regulation's objectives to mitigate the environmental impact of batteries and establish a safe, sustainable battery value chain. This includes the evaluation of carbon emission during battery production, ethical sourcing of raw materials, security of supply, and the promotion of reuse, repurposing, and recycling.

LINAK strives to ensure that all its batteries conform to CE marking requirements, which indicate compliance with EU safety, health, and environmental standards. By adhering to these requirements, LINAK demonstrates its commitment to providing safe and reliable battery solutions through comprehensive testing and assessment.

The CE marking serves as assurance for customers, that LINAK batteries are produced responsibly and safe for use.

Best regards,

LINAK A/S

Jette Jensen

Vice President, Quality
