LINAK® information about Per- and polyfluoroalkyl substances (PFAS)

To LINAK customers

LINAK is aware that PFAS are of global concern due to their persistence in the environment and effects on human health. Although the use of certain PFAS is restricted through national legislation, restrictions do not apply to all PFAS. Furthermore, we are aware that the manufacturing and usage of PFAS are in the process of being restricted under REACH <https://echa.europa.eu/da/-/echa-publishes-pfas-restriction-proposal>. We are continuously monitoring this REACH restriction proposal, to make sure that our products will continue to be in compliance with REACH.

PFAS exists in many different types of materials, and for various applications. We are aware of component types, such as greases, O-rings, coatings and plastics where PFAS is present in some LINAK products. This is mainly in the form of PTFE/Teflon. LINAK have investigated the use of PFAS in our products, and although the PFAS mapping is not concluded, we have a solid overview of the PFAS use.

If you have any questions, feel free to contact chemicalcompliance@linak.com.

Mange hilsner / Kind regards
Jette A. Jensen
